Presentation

Doctor Séverine Thevenet welcomes you to the heart of the Sentier in Paris. The office produces all of its prostheses on site in a laboratory in the basement of the same establishment. Our prostheses are 100% metal-free. Our wish is to provide high quality care at reasonable prices, and in a friendly atmosphere. All materials used are carefully selected for their lack of toxicity on the body. We carry out all general practice procedures: emergency treatment, scaling, conservative care, endodontics, prosthetics, periodontology, implantology, aesthetics. For ultra-specialized care, requiring the call of a specialist (bone graft, etc.), we have surrounded ourselves with people combining competence and humanity.
